

## FAMILY DECISION AID

Your doctor has determined your child is eligible to take amoxicillin to see if they are allergic to it during their visit today. Here is some important information to consider:

**In 100 children who report a penicillin/amoxicillin allergy:**

**1 will have an allergic reaction** after taking a penicillin antibiotic

**4 will have a rash that is not from an allergy** and 96 will not have any reaction

**Your child's reaction was likely NOT an allergy.  
It was probably a side effect or NOT due to the medicine.**

### SIDE EFFECTS

### ALLERGIC SYMPTOMS

### What are the Benefits of Testing My Child for an Allergy to this Medicine?

- Your child will be able to take penicillin/amoxicillin to treat common infections
- This medicine costs less money
- This medicine treats lots of infections
- This medicine has less severe side effects
- This medicine allows more options for treating common infections
